

David L Curry

I am a new software engineer in the process of a career change, who likes to look at the whole picture to find ways to develop a more intuitive user driven experience. Having a history of computer science and hardware technology, allows me to optimize my understanding of logical processes and statements that can translate to other coding languages. I have a strong sense of cooperation, and empathy, I think we all collectively want to succeed and we should all work towards that. I think that I can bring a fresh perspective to conventional thinking.

SKILLS

- Linux OS(ubuntu), HTML/CSS, JS, Node.js, Git, Express, Python, django, MongoDB, React, PostgreSQL, Heroku. (with more to come)

PROJECTS

- [MiniMe Equipment](#) - A MERN stack app in continuous development for a fantasy shoppingcart.
- [Spacecrafts](#) - Developed in a group setting, mirrors a vehicle trader site.
- [Reflux](#) - Developed during a collabathon with the UXDI cohort at General Assembly.
- [Eberron Offerup](#) - An Express app in the theme of D&D, one can manage mercenaries and adventures.
